**Directions for Q.61 to Q.65: Read the following passage carefully to answer the questions given below.**

Though the cold war has ended, selective tactics are still continuing for ensuring the military and economic dominance of developed countries. Various types of technology denial regimes are still being enforced which are now being mainly targeted against developing countries like India. Today, we in India encounter twin problems. On the one side, there is a large scale strengthening of our neighbours through supply of arms and clandestine support to their nuclear and missile programmes, and, on the other side, all efforts are being made to weaken our indigenous technology growth through control regimes and dumping of low-tech systems, accompanied with high commercial pitch in critical areas. Growth of indigenous technology and self-reliance are the only answer to the problem.

Thus, in the environment around India, the number of missiles and nuclear powers are continuously increasing and destructive weapons continue to pile up around us, in spite of arms reduction treaties. To understand the implications of various types of warfare that may affect us, we need to take a quick look at the evolution of war weaponry and the types of warfare. I am highlighting this point for the reason that in less than a century we could see change in the nature of warfare and its effects on society.

In early years of human history, it was mostly direct human warfare. During the 20<sup>th</sup> century up to about 1990, the warfare was weapon driven. The weapons used were guns, tanks, aircraft, ships, submarines and the nuclear weapons deployed on land/sea/air and also reconnaissance spacecraft. Proliferation of conventional nuclear and biological weapons was at a peak owing to the competition between the super-powers. The next phase, in a new form, has just started from 1990 onwards. The world has graduated into economic warfare. The means used is control of market forces through high technology. The participating nations, apart from the USA, are Japan, the UK, France, Germany,

certain South-East Asian countries and a few others. The driving force is the generation of wealth with certain types of economic doctrine.

The urgent issue we need to address collectively as a nation is, how do we handle the tactics of economic and military dominance in this new form coming from the backdoor? Today technology is the main driver of economic development at the national level. Therefore, we have to develop indigenous technologies to enhance our competitive edge and to generate national wealth in all segments of economy. Therefore, the need of the hour is arm India with technology.

61. Why do certain countries use selective tactics against developing countries?

- A) To help developing countries gain military and economic independence
- B) To help developing countries govern themselves and be economically independent
- C) To ally with developing countries to dominate over other developed countries
- D) To curtail their domination over developing countries

62. Which are the issues of great concern that India is facing at present, according to the author of the passage?

- 1) The supply of high-tech weaponry by other countries to India's neighbours who are likely to use the same against India
- 2) Other countries secretly helping India's neighbours to strengthen their nuclear might
- 3) Obstruction of India's genuine efforts to develop its own nuclear technology

Select the correct answer using the code given below:

- A) 1 and 2 only
- B) 2 and 3 only
- C) 1 and 3 only
- D) 1, 2 and 3

63. Enforcement of technology denial regimes by developed countries implies which of the following?

- A) Dominance of developing countries over developed ones
- B) Exploitation of developing nations by the mightier ones
- C) Targeting of developed countries by developing countries
- D) Sympathising with underprivileged countries

64. According to the author, the most effective way to counter our major problems is to

- 1) develop indigenous technologies
- 2) compete with other countries in their warring tactics
- 3) generate national wealth in all segments of economy

Select the correct answer using the code given below:

A) 1, 2 and 3

B) 1 and 2 only

C) 2 and 3 only

D) 1 and 3 only

65. What, according to the author, is the immediate problem to be collectively resolved by our country?

A) To counter the dominance of developed countries through money and muscle power

B) To eradicate poverty and become economically self-reliant

C) To control the exorbitant rate of population growth

D) To develop indigenous technology to manufacture mightier weapons

**Directions for Q.71 to Q.75: Read the following passage carefully to answer the questions given below.**

The evolution of Bring Your Own Device (BYOD) trend has been as profound as it has been rapid. It represents the more visible sign that the boundaries between personal life and work life are blurring. The 9 am – 5 pm model of working solely from office has become archaic and increasingly people are working extended hours from a range of locations. At the very heart of this evolution is the ability to access enterprise networks from anywhere and anytime. The concept of cloud computing serves

effectively to extend the office out of office. The much-heralded benefit of BYOD is greater productivity. However, recent research has suggested that this is the greatest myth of BYOD and the reality is that BYOD in practice poses new challenges that may outweigh the benefits. A worldwide survey commissioned by Fortinet chose to look at attitudes towards BYOD and security from the users points of view instead of the IT managers. Specifically, the survey was conducted in 15 territories on a group of graduate employees in their early twenties because they represent the first generation to enter the workplace with an expectation of own-device use. Moreover, they also represent tomorrow's influencer and decision makers. The survey findings reveal that for financial organization, the decision to embrace BYOD is extremely dangerous. Larger organizations will have mature IT strategies and policies in place. But what about smaller financial businesses? They might not have such well-developed strategies to protect confidential data.

Crucially, within younger employee group, (55%) of the people share an expectation that they should be allowed to use their own devices in the workplace or for work purposes. With this expectation comes the very real risk that employees may consider contravening company policy banning the use of own devices. The threats posed by this level of subversion cannot be overstated. The survey casts doubt on the idea of BYOD leading to greater productivity by revealing the real reason people want to use their own devices. Only 26% of the people in this age group cite efficiency as the reason they want to use their own devices, while 63% admit that the main reason is so they have access to their favourite applications. But with personal applications so close to hand, the risks to the business must surely include distraction and time wasting. To support this assumption, 46% of people polled acknowledged time wasting as the greatest threat to the organization, while 42% citing greater exposure to theft or loss of confidential data. Clearly, from a user perspective there is great deal of contradiction surrounding BYOD and there exists an undercurrent of selfishness where users expect to use their own devices, but mostly for personal interest. They recognize the risks to the organization but are adamant that those risks are worth taking.

71. According to the passage, for which of the following reasons did Fortinet conduct the survey on a group of graduate employees in their early twenties?

- a) As this group represents the future decision makers
- b) As this group represents the first generation who entered the workforce with a better understanding of sophisticated gadgets
- c) As this group represents the first generation to enter the workplace expecting that they can use their own devices for work purpose

A) A, B and C

B) C only

C) Both A and C

D) A only

72. Which of the following is not true about BYOD?

- A) BYOD enables employees to access enterprise network from anywhere and anytime

- B) Due to evolution of BYOD trend the 9 am – 5 pm model of working solely from office has become outdated
- C) Recent research has confirmed that BYOD boosts organizational productivity
- D) The concept of cloud computing facilitates the BYOD trend
73. According to the passage, why would the decision to embrace BYOD prove dangerous to smaller financial businesses?
- A) Their employees have poor knowledge about their devices which in turn pose a threat to the confidential data of the organization
- B) The employees are more vulnerable to misplacement of device
- C) They may lack mature IT strategies and policies required to protect confidential data
- D) They cannot afford to deal with damage liability issues of employee-owned devices
74. According to the passage, the expectation of younger employees that they should be allowed to use their own devices in the workplace, entails which of the following risks?
- A) Younger employees may deliberately transfer confidential data of their companies to rivals if they are not allowed to use their own devices for work purpose
- B) Younger employees may strongly feel like leaving the company if it prevents usages of own device and join some other company that does not have such stringent policies
- C) Younger employees may consider flouting company policy prohibiting usage of their own devices in the workplace or for work purposes
- A) C only
- A) B only
- C) Both A and C
- D) A only
75. According to the findings of the survey conducted by Fortinet, why do majority of employees prefer using their own devices for work purpose?
- A) As they often find that the devices provided by the company lack quality
- B) As they have access to their favourite applications while working
- C) As majority of them believe that output doubles when they use their own devices for work purpose
- D) As handling data from their own devices reinforces their sense of responsibility

**Directions for Q.76 to Q.80: Read the following passage carefully to answer the questions given below. You are required to select your answers based on the contents of the passage and opinion of the author only.**

All organisms such as plants, animals, microorganisms and human beings as well as the physical surroundings interact with each other and maintain a balance in nature. All the interacting organisms in an area together with the non-living constituents of the environment form an ecosystem. Thus, an ecosystem consists of biotic components comprising living organisms and abiotic components comprising physical factors like temperature, rainfall, wind, soil and minerals. For example, if you

visit a garden you will find different plants, such as grasses, trees; flower-bearing plants like rose, jasmine, sunflower; and animals like frogs, insects and birds. All these living organisms interact with each other and their growth, reproduction and other activities are affected by the abiotic components of the ecosystem. So, a garden is an ecosystem. Other types of ecosystems are forests, ponds and lakes. These are natural ecosystems while gardens and crop-fields are human-made ecosystems.
